

Addressing Micro-Surfacing Concerns

The City of Eau Claire Street Division is responsive to citizen concerns about the Micro-Surface sealing. Steps to improve the overall conditions during the project include the following:

- Placing signs to warn of Road Closed
- No Parking on either side of streets
- No DRIVING on Micro-surface seal until cured

Please slow down and use caution when driving on freshly sealed streets.

Contact Information

If you would like additional information regarding this years' Micro– Surface Sealing project, please call during regular business hours of 8 a.m. to 4 p.m., Monday through Friday. 715-839-4963.

2021 MICRO-SURFACING PROJECT

The MICRO-SURFACE seal program is designed to improve the quality of your street and to prolong the life of the street. Micro-Surface sealing is a cost effective, preventative maintenance method that will help avoid costly street reconstruction in the future.

Fahrner Asphalt, has been contracted to do the Micro-Surface sealing project, and is scheduled to begin [May 17, 2021 through May 28, 2021](#). (weather permitting). This will involve approximately 4 miles of city streets, and will take approximately 2-3 days for completion of each street/section.

Due to the number of streets scheduled, this procedure will create some inconveniences. The road will be closed to ALL traffic, and you WILL NOT have automobile access to/from your home for approximately an 8 hour time period. You WILL have to park a short distance from your home and walk to/ from your residence. Please be aware that exceptions will be limited to extreme emergency cases only. We apologize for this inconvenience. You will be notified by LETTER again, one to two days prior to your street being sealed. Fahrner Asphalt will place a letter on your door notifying you of the schedule. Your street will remain CLOSED until the barricades & NO PARKING signs are removed. Overnight closure is possible.

WEATHER PERMITTING Rain will delay the micro-surface seal process, up to a day or two.

Streets being Micro-Surfaced May 2021

Sections of the following streets are scheduled to start [May 17, 2021](#) (Weather Permitting)

Micro-Surface sealing is a process that is wet when applied, and will need at least 8 hours of drying time (curing) before it can receive ANY type of traffic. Driving or walking on the Micro surface seal before it has cured will damage the street, stick to your shoes, track into your home or business, splatter onto your vehicle, and track onto sidewalks and driveways. You will NOT be allowed to drive or walk on the Micro-Surface seal, OR drive into your driveway until the street is reopened to traffic. Violators will be charged for damages of the street.
